HOW YOUR ORDER SYSTEM WORKS

Boulangerie Kim's — prepared by Gam Geofrey 19th of October 2026

The big picture

Customer sends WhatsApp → Your system reads it automatically → Confirmation sent to customer in under 1 minute → Order saved to Google Sheet → Every evening at 20:00, you receive the day's orders

---

What the system does

- Reads every WhatsApp order as soon as it arrives
- Sends a confirmation to the customer automatically
- Saves all orders in one Google Sheet you own
- Alerts you if a message is unclear
- Sends you a summary every evening at 20:00

Where your data lives

Your orders are stored in a Google Sheet named **"[Bakery] Commandes"**.

- You own this sheet
- You can open it any time
- You can share it with your staff
- You can export it or print it

No one else can see it.

What the system does NOT do

These are not included in this phase:

- It does not handle payments
- It does not arrange delivery
- It does not read Instagram or Facebook
- It does not manage inventory
- It does not read voice notes

These are planned for phase two. You will be quoted separately if you want them.

When to contact Gam Geofrey

- System sends nothing for a full day
- A customer says they got no confirmation
- An order is missing from the sheet
- You want to add a new feature (phase two)

WhatsApp: +237653532228
Email: gamgeofreyankinimbom@gmail.com
Response time: within 24 hours, business days

You will never break anything by pausing the workflow. If in doubt, pause it and call.
